

STANDARD

LMC's Guillemin couplings are symmetric couplings designed in compliance with EN 14420-8 / NF E 29-572.

OPERATION

A Guillemin coupling, consist of a seal * on the connection surface and is closed by placing two identical coupling pieces together. This symmetrical coupling is closed by turning the locking ring through a quarter turn, and is sealed by tightening the locking ring behind the lugs. Extra closure can be applied by locking the Guillemin coupling using a Guillemin GY wrench. Guillemin coupling locking rings can be turned through 360° when disconnected.

*Seal available only on Guillemin couplings with locking ring.

FEATURES

1. High quality surface finishing
2. Long hose shank for extra hose assembly rigidity
3. Extra wall thickness for longer life time
4. Reinforcement device with hole for chain attachment
5. Extra large collar
6. LMC-Couplings brand name
7. Heat treated material
8. Material composition as required by the standard
9. Standard black seal with excellent compression set properties

N.B.: Guillemin couplings are not interchangeable with DSP couplings

APPLICATION

For pressure and suction delivery of liquids and solids (such as powders and granulates)

Irrigation: ND 65 – 100

Hydrocarbons: ND 40 - 50 - 65 - 80 - 100

Granulates: ND 80 - 100

Chemicals: ND 20 - 100 (stainless steel)

N.B.: Guillemin couplings must never be used for steam or liquid gas applications

WORKING PRESSURE

16 bar / 230 psi

Test pressure: 30 bar / 435 psi

Minimum burst pressure: 50 bar / 725 psi

TEMPERATURE

-20°C / -4°F up to +65°C / 149°F

Hose, coupling, assembly method and seal must be chosen in relation with the desired application and temperature range.

MATERIAL

■ Coupling

Aluminium heat treated

Stainless steel AISI 316 / 1.4401

■ Seal

NBR - black standard for stainless steel and aluminium

EPDM - white

FPM - green

PTFE - white

ASSEMBLY

Worm drive clamps

Band clamps

RK-safety clamps complying with EN 14420-3 / DIN 2817

FLEXOLINE® safety clamps

Swage ferrules for helical hose shank

Butt welding

THREADS

Male thread: EN ISO 228-1, BSP

Female thread: EN ISO 228-1, BSP

TESTING

Guillemin couplings are often submitted to heavy handling impact when loading and unloading liquids and solids. These couplings are therefore subject to more demanding testing methods than other couplings.

LMC's guillemin couplings undergo a number of tests executed by our Research & Development department. In addition to our own testing methods, we also use the latest gauges specified by the European EN 14420-8 standard. The following product properties are tested:

- Lugs
- Locking ring
- Material test
- Dimensions
- Quality finishing

- Lugs

A fall of a hose, assembled with Guillemin couplings, causes an import impact on the lugs of the coupling. Therefore the mechanical strength of the lugs must be tested. The mechanical strength of the lugs is tested using a conical weight falling around its axis onto the coupling lugs. This 'Chinese head' test is developed to test the internal impact of the lugs. The external impact of the lugs is tested using the 'pan' test, which is the opposite of the 'Chinese head' procedure. LMC guillemin couplings passed both lug tests successfully. A gauge is then used to check the dimensions of the lug spacing, as specified by the EN 14420-8 standard.

- Locking ring

The locking ring is tested by simulating a fall to the ground. The test device consists of a sway arm and a weight. When the arm falls onto the locking ring, the ring deforms as a result of the heavy impact. LMC-Couplings conducts this test to discover whether there are any signs of post-impact deformation or fracturing. In practice, a locking ring cannot deform, since it is mounted onto the body of the Guillemin coupling. However, if the chemical structure of the locking ring is inadequate, then the locking ring will break immediately. The LMC-Couplings locking ring resumed its original shape after testing, and displayed no evidence of fracture.

- Material test

An in-house spectroscope is used to test the materials used in the Guillemin couplings.

The spectroscope analyses the precise material substances found in the coupling.

We can therefore offer our customers a guarantee that the materials used comply fully with the relevant standard.

- Dimensions

The dimensions of LMC Guillemin couplings comply with EN 14420-8 / NF E 29-572.

Guillemin couplings manufactured in compliance with this standard are interchangeable.

The Guillemin couplings are randomly checked for correct dimensions using two different measuring methods:

1. Measuring tool

2. Gauges

Our measuring system compares the dimensions of our Guillemin couplings comply with the standard. Although ordinary measuring systems are unable to give precise measurements, our measuring system is able to measure the less accessible parts and shapes of Guillemin couplings. This minimizes inspection times and ensures the highest levels of product quality. The European EN 14420-8 standard requires the use of gauges to guarantee interchangeability of Guillemin couplings. LMC-Couplings uses gauges as a random quality measurement system at several production stages, in our production department, on arrival in our warehouse and before goods are shipped to our customers. Using the gauges required by the European EN 14420-8 standard, LMC-Couplings measures the following four quality-point dimensions of its Guillemin couplings:

A. Seal groove

B. Locking ring

C. Outside diameter

D. Inside diameter

- Quality finishing

LMC's Guillemin couplings meet the high requirements of the EN 14420-8 / NF E 29-572 standard. A lot of attention was focused on product design. The design of the lugs, the ergonomic locking ring, the special treated surface, length of hose tail, plug with chain, branding ... and many more details guarantee a highly finished product.

Guillemin couplings vs DSP couplings

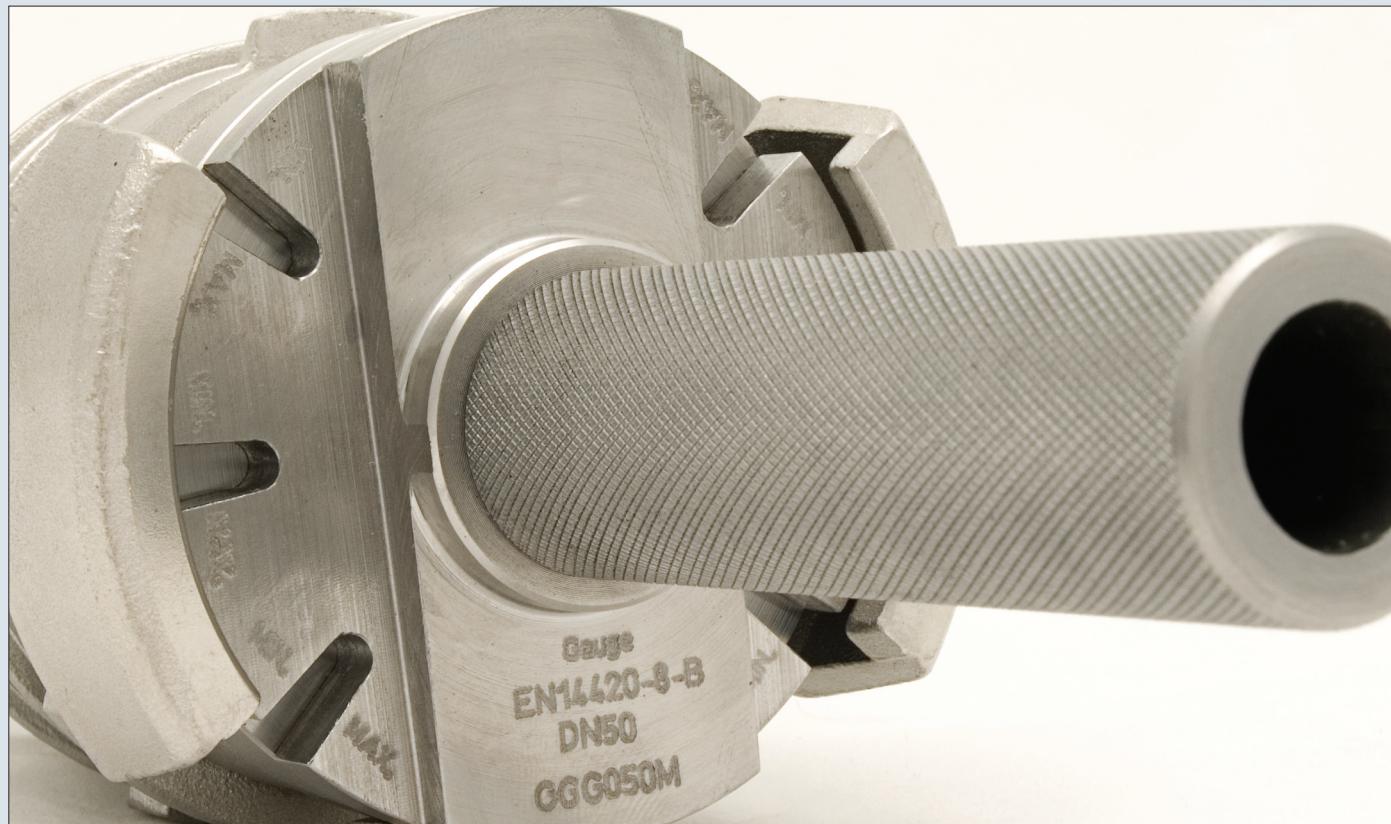

| | GUILLEMIN COUPLINGS | DSP COUPLINGS |
|------------------|--|---|
| Standard | EN 14420-8 / NF E 29-572 | NF S61-704 / NF S61-705 |
| Main application | Pressure and suction purposes in wide range of industries | Pressure and suction purposes in fire fighting |
| Lug | Smooth (a) | Triangular (b) |
| Locking ring | Smooth Rotation of 360° | Serrated Rotation of 45° |
| Seal | Square seal | Profiled seal |

| 100 | 4" | 100 | Stainless steel | 3.55 | CRGSG100 |

Working pressure: 16 bar / 230 psi

Seal: NBR - black

Shank: composite hose shank in metric size

Stainless steel: AISI 316 / 1.4401

Assembly: swage ferrules with crimping seal

SWAGE FERRULE FOR HELICAL HOSE SHANK AND COMPOSITE HOSE
